Let's yarn new Bundaberg Hospital project

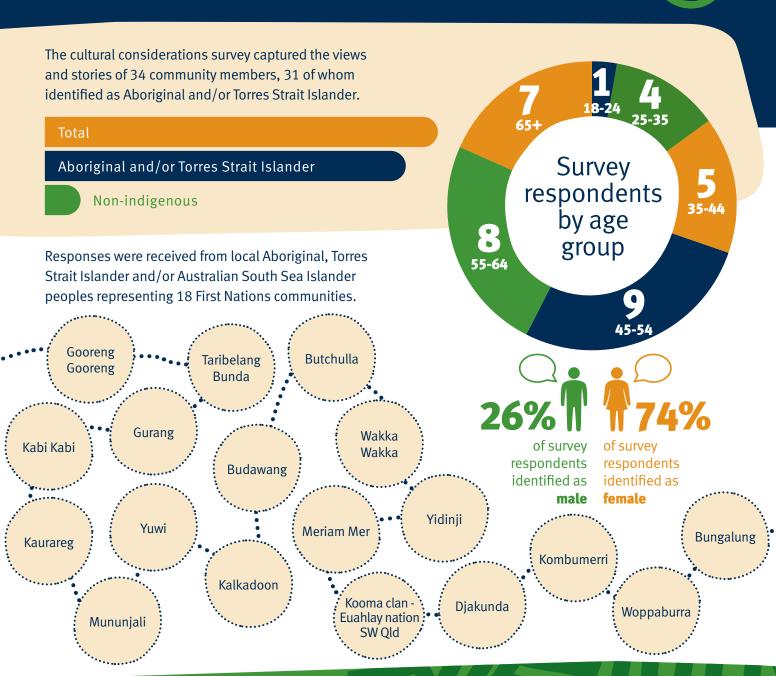

Snapshot survey results

It is important that all communities that use the new Bundaberg Hospital feel culturally welcome, safe and able to access compassionate and equitable care.

Wide Bay Hospital and Health Service conducted a cultural considerations survey for the new hospital project from 24 October to 22 November 2024. The survey aimed to gather insights and stories to help shape aspects of the design such as storytelling integration, cultural features and colour/plant selections.

Distributed through an online platform, printed hard-copies, in-person delivery to patients and Community, local Aboriginal and Torres Strait Islander organisations, and local and state government stakeholders, the survey engaged a range of participants.

Survey responses indicated a strong association with natural and earthy tones such as ochre, reds, yellows and oranges, symbolising strength, grounding and connection to Country, as well as greens and blues, representing water, plant life, the sky and renewal, all linked to healing and wellbeing.

Some respondents also emphasised pastel colours and softer tones for their calming and restorative effects, while white and purple were seen as representing guidance, clarity, spirituality and protection.

ocean blue Ochre earth tones red
water pastel colours sea yellow calming
soft white Dlue land earthy
plants bright colours green sky
purple healing brown orange
wellbeing calming rainbow softer tones

We appreciated the diverse range of suggestions regarding Aboriginal and Torres Strait Islander artists with connections to the local area who may be interested in future art opportunities.

The emphasis on engaging artists whose work reflects local cultural heritage and stories was particularly valuable. This feedback will be shared with our Arts in Health Program Working Group.

Important features when arriving at the new hospital:

There was a strong desire to incorporate local cultural features and stories into the design of the new Bundaberg Hospital. Key suggestions included:

Art and design

Many felt it was important to include cultural artwork throughout the new hospital, including murals, and the use of traditional and non-traditional icons and symbols. This could also extend beyond framed pieces (e.g., woven into walls and walkways).

Connection to local landscape

Many responses emphasised incorporating local geographical features such as the Burnett River, Mon Repos, Hummock and nearby waterways and coastal areas. References to local native plants (e.g., paperbark, stringybark trees, mangroves, macadamia nuts) and wildlife (e.g., birds and fish) were mentioned as integral to the design.

Healing and cultural gardens

A bush medicine garden and native healing plants were suggested, along with the inclusion of native plant gardens that could be accessible to both patients and visitors.

Stories and language

Respondents emphasised the importance of local stories. cultural landmarks, connection to ancestors and Country, dreaming stories, song lines, particularly around local clan groups, animals (such as turtles, kangaroos and fish), and totems. Language should also be integrated, whether through signs or artwork.

Spaces for community

Suggestions
included creating
family rooms for
cultural gatherings
for mob to gather,
especially for
important family
moments, and
providing spaces
for mutual meeting
and private
reflection.

Other suggestions

(e.g., cultural seating and First Nations volunteers) **Hard copy map Digital information kiosk Clear signage** How can we make it easier for you to find your way around the new hospital? A volunteer to help with directions Visual elements such as traditional symbols and coloured pathways The new hospital will have dedicated spaces for Aboriginal and/or Torres Strait Islander peoples to gather. Survey feedback emphasised the need for these spaces to be culturally respectful and accessible, with requests for natural, calming elements like plants, water features and traditional art. Respondents also highlighted the importance of providing comfortable, accessible seating, especially for Elders and people with disabilities, and incorporating spiritual spaces such as yarning circles and areas for smoking ceremonies.

Educational materials about traditional healing practices and use of bush medicine

Combination of natural seating (wooden logs, large rocks) as well as conventional seating (comfortable seating with backrests / armrests)

Yarning circles to foster communication and community gathering

Artwork (murals, paintings, sculptures of totems, symbols, woven materials, artefacts, totems, carvings and painted rocks reflecting local stories and culture)

Curved furniture

Natural and earthy colours that reflect the local environment Artwork by children in hospital

What cultural features do you feel are most important?

Soft and dimmable lighting, and soothing music

Sheltered outdoor spaces for families and patients to gather

Natural elements /
materials like native plants
(e.g., Gumbi Gumbi for
medicinal purposes),
sandstone, rocks and
wood and water

Tea-making facilities

Native plants and paintings that represent local stories and totems, accompanied by written explanations of the stories

Information on how to access culturally safe and responsive support

Visual privacy and quiet reflection

Spaces for reflection and spiritual practices, such as areas for smoking ceremonies

Where to from here?

The insights gathered through this survey are invaluable and will play a crucial role in shaping the final design of the new hospital. Our commitment to creating a culturally inclusive and welcoming healthcare environment remains a top priority.

We extend our sincere thanks to all survey participants for sharing their voices and perspectives. Your input is essential in helping to design a space that reflects and honours our local cultures, traditions, and values.

We look forward to continuing this journey with you as we work towards delivering a hospital that serves everyone with respect, dignity, and care.
